

Take the worry out of worming with one of the most successful veterinary led worming packages in the UK

Independent vets, dedicated care

Bideford • Bradworthy • Bude • Holsworthy • Ilfracombe
Pilton • Roundswell • South Molton

torchequinevets.com

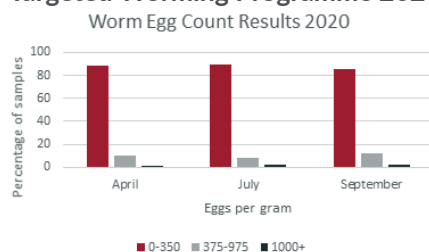

Research shows that up to 90% of worm treatments may be unnecessary and that over-worming is contributing to the rise of wormer resistance.

At Torch Equine Vets, we've prevented over 3500 unnecessary worm treatments in the last five years.

Benefits of the Targeted Worming Programme:

- ✔ Use up-to-date veterinary knowledge to create a 'greener' method of worm control
- ✔ A modern alternative to traditional fixed interval dosing regimes
- ✔ Identify those 'wormy' horses in the paddock
- ✔ Provide evidence that the worming regime is effective
- ✔ Identify horses carrying strains of resistant worms
- ✔ Suitable for horses living individually or on larger yards
- ✔ Use only effective drugs at the right time of year

Targeted Worming Programme 2020

This graph demonstrates that over 80% of samples from 2020 were below our treatment threshold of 200 eggs per gram. Most horses as a result are only wormed once a year.

Yard Fee: £68.17 inc. VAT

Full postal scheme £74.69 inc. vat
(<700kg. Discounts available to multiple)

A complete annual worming solution for adult horses and ponies:

- ✔ Our targeted worming programme provides a winter worm treatment to cover encysted small redworm larvae and tapeworm
- ✔ Three worm egg counts are carried out throughout the spring and summer. Kits and return postage are sent directly to your door
- ✔ Veterinary reports are sent out with worm egg count results
- ✔ Roundworm treatments FOC if required
- ✔ Optional EquiSal™ saliva test for tapeworm
- ✔ Suitable for adult horses from 4 years of age

Please note that worm egg counts do not detect encysted redworm larvae, tapeworm or pinworm.
If you are concerned about infection, please contact your vet.

Full membership onto the targeted worming programme is included for all EQUINE TOTAL HEALTH CARE PLANS.

A supplement of £25 is added for horses weighing over 700kg.

Individual worm egg counts are available. Our vets are happy to advise on which wormers should be used at a particular time of year. Youngsters and pregnant mares require special consideration.
